

Talent Alignment — Skill Gap Report

RFP-2026-091 · European Data Platform Engagement · Prepared by Talent Alignment Module · Confidential

1. Context

The client engagement beginning next quarter requires two roles that could not be filled by internal matching or external sourcing. The following resources were identified as the closest internal candidates; each carries a skill gap that requires a structured training and certification workflow before deployment clearance can be granted.

2. Identified Skill Gaps

Resource	Role	Current Strengths	Gap	Target
Aisha Osei aisha.osei@centific.ai	Data Privacy Analyst	Data mapping, vendor reviews, US privacy frameworks (CCPA)	European data-protection practice: law of cross-border transfer rules	Certified DSR practitioner (IAPP-recognised)
Viktor Lindqvist viktor.lindqvist@centific.ai	Platform Engineer	Kubernetes, Terraform, observability tooling	Information-security management: ISMS audit preparation	ISO 27001-aligned registers, foundation certificate

3. Constraints

Engagement start is fixed; training must complete before the deployment buffer. Both resources remain partially billable during training, so programs should be modular and self-paced where possible. All assessments must include an applied component demonstrating competence on realistic client-like data.

4. Requested Action

Generate a personalised training program per resource, covering content modules, an online knowledge test, and a practical case study. Programs are subject to Talent Lead review and approval before any assignment is initiated.
